Formulas

Formulas are created with the Microsoft Word built-in formula editor.

Only Latin letters should be used in designations and indices (in texts and figures), for example, it is required to write P_{\max} , not $P_{\text{макс}}$.

Other requirements and recommendations

Inseparable and inextensible spacing separates the following:

- the initials from the surname (I.I. Ivanov);
- abbreviations from the words that follow after them (riv. Neva);
- words ‘Fig.’, ‘Table’ from the number that follows after them (Fig. 1.);
- designation of dimension from value (60 dB, 200 m).

Symbols in formulas and in the text should be the same.

Recommended type of quotes is ‘’.

Names and figure numbers are indicated under the figures, names and numbers of the tables - above the tables. Tables, diagrams, figures and graphs should not go beyond the stated margins (font size in tables and figures no less than 10 pt).

It is recommended to type the text without word hyphenation.
